

How to make a six-pointed snowflake

You will need:

- a sheet of A4 paper
- a ruler
- a pencil
- scissors.

First, fold the paper in half lengthwise to make a rectangle. Find the centre point along the fold and mark it in pencil.

Next, measure 9cm from the top left-hand corner and make another mark. Draw a line to join the marks.

Fold the bottom right-hand side up to lie along the line you have drawn.

Now fold the bottom left-hand side over the top to meet the right-hand fold.

Cut as shown by the dotted lines.

Cut out patterns if wished.

Finally, open out and display.
